

Pervasive Backup Agent

- **Intelligent Backup Protection, Online and Offline**
- **Ensures Accurate and Complete Point-in-Time Recovery**
- **Works directly with ARCserve[®], Backup Exec[™] and others**

The Challenges of Reliable Database Backup

Successful database backups, whether to tape, disk, or optical media, require three things: Accurate point-in-time recovery, no interruption of service, and an easy-to-use solution that makes it happen.

Pervasive[®] Backup Agent[™] — The Backup Safety Net

• Backs Up Your Backup

Works with your backup software and the Pervasive PSQL[™] engine to ensure accurate and complete point-in-time recovery.

• Protects Your Data Integrity

Keeps files that are changed while a backup is running from impacting data integrity, so you can back up your data any time, even during peak use hours, with no interruption of service.

• Intelligent Management

Backup Agent *automatically* rolls in changes from the delta files to the data files should a server crash occur during a backup session.

• Easy to Install and Use

Requires no administration, and provides the most important benefit—peace of mind.

Intelligent Backup Protection

Backup Agent works transparently during a backup session by automatically placing files that are open during the session into a “continuous operations” mode—all changes are buffered and applied to the file after the backup.

CLIENT APPLICATION

Pervasive PSQL

PSQL
PLUG-IN
MANAGER

PERVASIVE
Backup Agent[™]

Third-Party
Backup Software

Tape, Disk, or
Optical Backup

Pervasive Backup Agent

Zero Administration

There are no configuration settings, and an administrator is not needed.

Easy to Install and Use

Simply install and use through a simple GUI, or add start/stop commands for automatic backup of your database. Remember, Backup Agent works behind the scenes for intelligent backup.

• Through a Simple GUI

Easy to turn on and off. Turning it on places the Pervasive PSQL database in backup mode. When the backup is complete, turning it off will return the database to normal operations.

• Scripted from a Command Line

Simply add start and stop commands to your existing backup software's pre and post

commands. Your backup jobs will then automatically call Backup Agent at the appropriate times, guaranteeing consistent and reliable Pervasive PSQL database backups for your regularly scheduled jobs.

• Embedded in an application

Backup Agent exposes an API for application developers, so you can add it directly into applications and provide the highest level of backup data assurance.

Protect Your Data Now

Pervasive Backup Agent is the simplest way to manage Pervasive PSQL database operations during data backups. Backup Agent provides complete database protection.

www.pervasive.com/backupagent

Benefits:

- Backup operating Pervasive PSQL databases
- Fast, simple, easy to install and use
- Ensure data integrity
- Compatible with all the major backup software
- Replaces manual continuous operations processes
- Transparent to all user applications
- No interruption of service
- Point-in-time recovery

Specifications:

Supported Platforms

- Windows NT 4.0 SP6 or higher
- Windows 2000
- Windows 2003
- Linux (Kernel 2.4 or higher)

Supported Databases

- PSQL V8 and v9
